

Phase 7: Project Documentation

AI Brand Voice & Marketing Content Generator

1. Developer Installation & Environment Setup

To replicate and deploy the AI Brand Voice Generator, execute the following CLI sequences. Ensure Python 3.9+ is pre-installed on your system:

```
# 1. Clone the project repository from GitHub
git clone https://github.com/niketsah007/AI-ML-and-GEN-AI-Track-Project-Template
cd AI-ML-and-GEN-AI-Track-Project-Template

# 2. Build local virtual environment and install version-locked dependencies
python -m venv venv
source venv/bin/activate # On Windows, use: venv\Scripts\activate
pip install -r requirements.txt

# 3. Configure secrets management
# Create a '.env' file in the root project directory and paste your API Key:
GEMINI_API_KEY=your_google_gemini_api_key_here

# 4. Initialize SQLite3 persistence database and create tables
python database.py

# 5. Boot application on local server
python -m streamlit run app.py
```

2. End-User Execution Instructions

- **Step 1: Set Brand Context:** Enter the 'Brand Name' and define your 'Campaign Purpose' inside the sidebar controls.
- **Step 2: Upload Authentic Samples:** Input 3-5 lines of authentic past marketing copy in the sample box to teach the AI your tone.
- **Step 3: Select Format & Generate:** Choose your target marketing format from the dropdown, then click 'Generate Content'.
- **Step 4: Refinement Loop:** Review the draft content on the canvas. If modifications are required, enter natural instructions (e.g., 'Make it more persuasive') in the feedback box and click 'Apply Changes'.
- **Step 5: Copy Output:** Once satisfied, click 'Copy to Clipboard' to instantly copy the finalized, clean copy without conversational meta-talk.
